## IN

## The single source for top service and advanced expertise

We have been producing drive and control systems for industrial doors at our plant in Dusseldorf (Germany) since 1954. We now market more than 200,000 units a year under the ELEKTROMATEN ${ }^{\circledR}$ brand name.

With advanced solutions and state-of-the-art production techniques, we set the benchmarks that others aspire to. As a market leader, we fulfil the exact requirements of our worldwide customer base.

Quality and reliability are the two pillars of our commercial approach as a company. A finelytuned production management system helps to ensure that our customers are supplied both reliably and on time. This involves the careful integration of production processes and logistics, which is why we can guarantee that over $95 \%$ of our deliveries will be on time.

All GfA products are manufactured to the highest standards of precision. We check the results using the very latest in measuring instruments. Each process involved, whether it is distribution, design, production or anything else, is certified to DIN EN ISO 9001:2015 standards. This is why we are able to guarantee such high quality for our products.

Our greatest asset is our team of 260 employees. Permanent advances in the honing of individual skills and an ongoing in-house exchange of information form the basis of our innovative strength, not forgetting the intensive development work designed to secure our long-term future. This means that there are always various innovative and practical solutions ready to try out at any given time. Cost efficiency together with technical perfection to create products for the future.

## Website/ GfA-Portal

Our website offers further information of our products. The GfA-Portal gives you access to technical and service information as well as installation instructions and other interessting functions.
www.gfa-elektromaten.com

## GfA-Portal - Function Overview

The Portal represents the customer area of GfA on the Internet (1). After registration on the Portal every function can be called up via a tile (2).
Some functions need a special authorisation because of the privacy provisions and are therefore available only after an extended registration process. These functions are marked separately by ( $\mathcal{E}$ ). English, Czech, Dutch, French, German, Italian, Polish, Russian, and Spanish language are currently available as menu languages. However, you can select documents and functions in many other languages.

## $\otimes_{\infty}$

## Documentation on Request

This function allows to select installation instructions in up to 18 different languages. After entering the GfA item and model number, you will receive an e-mail with the instructions on the desired product in the PDF format. Instructions are currently available for ELEKTROMATEN, door controls and safety brakes. We are constantly working on improvements, both of the contents and the available languages.

## .

## Delivery Information ©

Here you can see the status of your deliveries. You will receive information about the dispatch date and the forwarding agent. You can track your delivery via linking of the dispatch data with the forwarding agent. This way, you can always be up to date on the whereabouts of your delivery and when it will arrive to you.

## Service Informationen

The Service Information describes functions of GfA products or special product handling and supports you in installation, operation and maintenance. Moreover, you will receive information about the services of GfA, for instance, about the Portal. Standards and directives are further topics which are dealt with in the Service Information. On the Portal you will find all already published Service Information and can view it sorted according to certain criteria. About 5 to 10 new issues of Service Information appear in the English, Czech, Dutch, French, German, Italian, Polish, Russian, and Spanish language.

## Technical Information

The Technical Information describes changes and improvements of GfA products. This can be, for instance, a presentation of a new product or the description of a detailed change to an existing product. On the Portal you will find all already published Technical Information and can view it sorted according by certain criteria. About 10 to 15 new issues of Technical Information appear in the English, Czech, Dutch, French, German, Italian, Polish, Russian, and Spanish language.

## S

## TS-Data Cloud

Part no.: 20003696
For setting and servicing works on the door equipment the GfA-Stick was developed. The tool allows together with the .,GfA+" app to select and display important data from the GfA door controls (generation TS-B) ${ }^{11}$. Among other things, software status, connected hardware, programmed settings, recent actions and stored error logs can be displayed on a smartphone ${ }^{21}$. Efficient diagnostics of the door operator equipment becomes thus possible. With a registration on the GfA-Portal this data can also be transferred via Internet into the TS Data Cloud. On the TS Data Cloud you can access the structured data at any time, without limitation. An integrated search and filter function allows the comfortable data management. They can be filtered, for instance, by readout date or location of the door. A group function also allows the monitoring of different doors and locations as well as the co-ordinated and personal access to the data. Furthermore, the GfA after-sales service can log by request into the data records which you have recorded. If necessary we can guide you directly by phone when working at the door.

## 9 <br> User Profile

In your user profile you can manage your access data and settings. Here you can specify, for instance, whether you wish to be informed automatically of new Technical or Service Information by e-mail.

## Notes

The registration on the GfA-Portal is available at: https://portal.gfa-elektromaten.de/en. You can set up an extended access ( $\mathcal{E}$ ) via your sales representative. We will gladly advise you: http://gfa-elektromaten.com/en-DE/contact.html

## We help you saving money with flat-rate shipping cost

## Shipping cost inside the European Community

Freight and packing costs are met by us and billed to you at a flat rate, so that you can pay shipping cost directly to us.

## This means:

There is no separate bill for shipping costs

- Shipping cost are lower thanks to our special rates

## And therefore:

- Lower processing costs

■ Easy account auditing

Valid freight costs for the EC-countries can be found at:
Please contact our international sales team.

## Parcel service:

Transport of goods up to 30 kg incl. packaging can be sent quickly at a low cost for customers by a parcel service. International flate-rate shipping cost could be found:
Please contact our international sales team.

## Flat-rate repairs - just in case

GfA ELEKTROMATEN has been proving their reliability for many years. All mechanical parts and all electrical components are subject to strict quality testing. Upon leaving the production line, each ELEKTROMATEN is subject to another exhaustive final inspection. Malfunctions can nevertheless occasionally occur during long-term operation.

## Customer satisfaction based on fast response times

A faulty door is bound to be a source of inconvenience and irritation to your customer, which is why a fast and accurate response is required from you. Our flat-rate repairs help you restore the satisfaction levels of the customers that we have in common.

## What will it cost to repair?

You have no doubt heard this question many times. In order to help you give an immediate straight answer in the future, we have set up a system of flat-rate repairs. These flat rates apply to ELEKTROMATEN that are capable of being repaired, and which are not excessively old or worn out.
If a repair is no longer possible, we will inform you.
Our flat-rate repairs are very competitively priced. They are designed to let you make fast decisions in your efforts to satisfy the customers that we have in common. We regret that we cannot offer discounts on flat-rate repairs. We therefore ask you to understand that we have to bill all freight and packaging costs separately for these repairs.

## Load diagram for tubes according to EN 10220

## Recommended specifications for roller shutters, rolling grilles, etc.

The load specifications detailed below apply to static loads on steel structures.

In roller-shutter construction, these tubes are used as winding shafts for the shutter slats.

Up to a tube length (i.e. door width) of approx. 10 m , between the bearings a maximum deflection of $1 / 500$ can be taken into account.

## Example

With a door width of 5 m , the deflection should not exceed 10 mm . Please obtain the maximum permitted worth from the supplier of the tube. Please contact us if you intend to install doors of larger width.

## IP Protection

## Degrees of protection (IP) against water and contact provided by enclosures according to EN 60529

NormStandard EN 60529 describes the test procedure for degrees of protection. Depending on the degree of protection, the product is sprayed with a predetermined water pressure and a certain amount of water from a distance of about 3 m . This test takes only a few minutes and does not include spraying the product with a high-pressure cleaner. Constant spraying with water or installation outdoors requires provides additional protective measures.

## Caution

The degrees of protection describe only the protection against the ingress of dust or water in an environmentally acceptable composition. For aggressive compositions, such as alkaline solutions, solvents, salt water, cement dust, etc. a specified enquiry is required.

## IP degrees and their significance

| Component | Code numbers or letters | Significance for protection of equipment | Significance for personal protection |
| :---: | :---: | :---: | :---: |
| Code letters | IP |  |  |
| First digit |  | Against ingress of solid foreign objects: | Against access to hazardous parts (with): |
|  | 0 | No protection | No protection |
|  | 1 | $\emptyset \geqslant 50,0 \mathrm{~mm}$ | Back of hand |
|  | 2 | $\emptyset \geqslant 12,5 \mathrm{~mm}$ | Finger |
|  | 3 | $\emptyset \geqslant 2,5 \mathrm{~mm}$ | Tools and wires $\varnothing \geqslant 2,5 \mathrm{~mm}$ |
|  | 4 | $\varnothing \geqslant 1,0 \mathrm{~mm}$ | Tools and wires $\varnothing \geqslant 1,0 \mathrm{~mm}$ |
|  | 5 | Dust protected | Full protection |
|  | 6 | Dustproof | Full protection |
| Second digit |  | Against ingress of water: |  |
|  | 0 | No protection |  |
|  | 1 | Vertically dripping |  |
|  | 2 | Dripping water (up to $15^{\circ}$ from vertical) |  |
|  | 3 | Spray water (up to $60^{\circ}$ from vertical) |  |
|  | 4 | Splash water (from any direction) |  |
|  | 5 | Jet water (from any direction) |  |
|  | 6 | Powerful jet water (from any direction) |  |
|  | 7 | Temporary immersion |  |
|  | 8 | Submersion |  |

When dealing with quotations, customer specifications, etc., check to verify, if required degrees of protection differ in any way from the details given in the GfA catalogue.

## Overview of the ELEKTROMATEN ${ }^{\ominus}$ type series

## The right gearbox series for every application

The achievable output torque of the GfA ELEKTROMATEN is largely determined by the centre distance of the worm shaft to the output shaft in the gearbox. There are currently six different centre distances for the worm gearbox series.

Other distinguishing features exist besides the centre distance. These distinguishing features are also included in the designation of the series. The following table gives an overview.

| Series | Center distance [mm] | F <br> Integrated Safety Brake | R <br> Friction clutch |  | ELEKTROMATEN ${ }^{\text {® }}$ | Section |

## Drive technology according to your requirements

ELEKTROMATEN ${ }^{\circledR}$ © open logistic buildings, stadiums, underground car parks and factories. Proved over a million times and with high reliability. Even special environmental and application conditions are no problems. Increased humidity, dust exposure, high and low temperatures, contact with aggressive
media or requirements for explosion protection GfA has the solution. Fully specialized drive units or modular additions to the standard ensure the required function. Options for optimising GfA door controls (B) and in the accessories range (C) are also available for specific environmental condition.

## Examples of ELEKTROMATEN:

(1) Special gearbox oils for use in the food- or animal feed industry, special paintwork
(2) Hollow shafts and fixing elements with special coating or made from stainless steel
(3) Encapsulated breaks
(4) Emergency manual operations with chains made of stainless steel
(5) Encapsulated mechanical microswitches
(6) Dust and jet water-proof terminal boxes
(7) Fully specialized drive units for explosion protected areas according to ATEX ${ }^{11}$ specifcation

Examples of door controls ${ }^{21}$ and accessories ${ }^{31}$ :
(8) Protective covers
(9) Special housing
(10) Door leaf boxes with increased protection
(11) Splash guard for door leaf boxes

$\square$ 1) See section $6 \square$ 2) See section $8 \square$ 3) See section 9

Your contact person will be happy to advise and offer you the best possible solution.

## S

## ELEKTROMATEN® ${ }^{\text {® }}$

## Safedrive ${ }^{\circledR}$

For driving:
Non-balanced sectional doors, roller shutters and rolling grilles SI 14.20 which require an anti-fallback device
"Safedrive ${ }^{\circledR "}$ ELEKTROMATEN SI are special drives for industrial doorswhich require an anti-fallback device. The patented safety brake is built into the gear. The drive unit is fitted directly to the door shaft.
Safedrive ${ }^{\circledR}$ ELEKTROMATEN comprises of:
Worm gear with safety brake and hollow shaft, emergency manual operator,
integrated limit switches and electrical motor.

## Patented built-in safety brake

■ Safety against failure of worm or wheel
■ Independent of speed / direction

- Maintenance free, self-monitoring

■ Excellent damping characteristics in operation

## Approvals and certificates

## ELEKTROMATEN

Type test according to:
Built-in safety brake
Certificate of conformity according to: DIN EN 12604 / 12605
ift Rosenheim GmbH

DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

## Limit switches

## Mechanical limit NES

■ 2 operating, 2 emergency- and 2 auxiliary limit switches

## Digital limit DES

- Absolute encoder, after a power failure, re-adjustment is not required

## Mounting

- Fitting thread 8xM8 (standard fitting)
- Torque bracket

■ Flange bracket

## Special versions

- Increase of cycles per hour
- Higher protection class

■ Other voltages and frequencies
Explosion-proof according to ATEX Ipage 6.011

## Door controls

■ Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels

- Control voltage: 24 V

■ Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
Mains supply:
$1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$
Details of all GfA door controls can be found in Section 8.

Generally applies: Degree of protection IP65 (combined with WS 900: IP54), permissible temperature range $-10^{\circ} \mathrm{C} . .+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$ 1) See 3.5 -2) Maximum torque that may act on the output shaft of the drive unit when the door is stationary. 3) We recommend the selection of GfA ELEKTROMATEN-FI for use with frequency inverter, OPEN drive speed at 87 Hz , see 3.7 -4) The operating current in door drives can reach up to $4 x$ the rated current for limited periods, see 3.6 and 3.7 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $3.2 \cdot 6$ ) Maximum revolutions of hollow shaft 7) Applies to hollow shaft $\emptyset 30 \mathrm{~mm} \cdot$ 8) See 3.4

## 2. Selection chart

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes $20 \%$ friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

We recommend ELEKTROMATEN FI with an integrated frequency inverter (on request).
For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

### 3.8 Cable / Cable drums

When calculating the cable size the max. permitted door weight is required with a safety of $6 x$ for the cables; requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least $20 x$ the diameter of the cable.

## 4. Dimensions

Worm gear with safety brake
(2) Motor
(3) Limit switch

Optional:
WS 900 control panel,
removable, with $0,8 \mathrm{~m}$ cable
(5) Hand crank NHK

Part no. 30002685

All brackets can be mounted vertically or horizontally

## ELEKTROMATEN ${ }^{\text {® }}$ SIK

## Safedrive ${ }^{\circledR}$ Compact

"Safedrive ${ }^{\circledR}$ Compact" ELEKTROMATEN SIK are special drives for industrial doors which require an anti-fallback device. The patented safety brake is built into the gear. The drive unit is fitted directly to the door shaft. Safedrive ${ }^{\oplus}$ ELEKTROMATEN SIK comprises of: Worm gear with safety brake and hollow shaft, emergency manual operator, integrated limit switches and electrical motor.
The centrally-aligned hollow shaft of the ELEKTROMATEN SIK makes it suitable particularly for installation in tight spaces.

## Patented built-in safety brake

- Safety against failure of worm or wheel

■ Independent of speed / direction

- Maintenance free, self-monitoring

■ Excellent damping characteristics in operation

- Compact dimensions

## Approvals and certificates

## ELEKTROMATEN

Type test according to:

Generally applies: Degree of protection IP54, permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level $\mathrm{SPL}<70 \mathrm{~dB}(\mathrm{~A})$

1) See 3.5-2) Maximum torque that may act on the output shaft of the drive unit when the door is stationary. 3) We recommend the selection of GfA ELEKTROMATEN-FI for use with frequency inverter, OPEN drive speed at 87 Hz , see 3.7 - 4) The operating current in door drives can reach up to $4 x$ the rated current for limited periods, see 3.6 and 3.7 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also 3.2 6) Maximum revolutions of hollow shaft 7) See 3.4

## 2. Selection chart

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 20 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

Generally applies: Degree of protection IP65 (combined with WS 900: IP54), permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(1+60^{\circ} \mathrm{C}\right)$, operating sound pressure level $\mathrm{SPL}, 70 \mathrm{~dB}(\mathrm{~A})$ 1) Customised designs of the SI 25.15 (e.g. for other voltages) are realised, in part, with the SG85F gearbox series (please contact us, in case of queries) 2 ) See 3.5 . 3) Maximum torque that may act on the output shaft of the drive unit when the door is stationary - 4) We recommend the selection of GfA ELEKTROMATEN-FI for use with frequency inverter, OPEN drive speed at 87 Hz , see 3.7 -5) The operating current in door drives can reach up to 4 x the rated current for limited periods, see 3.6 and 3.7 . 6) One cycle consists of a complete opening and closing movement of the door. The value according to $\mathrm{EN} 60335-2-103$ is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increa
7) Applies to hollow shaft $\emptyset 30 \mathrm{~mm} \cdot$ 8) See 3.4

## 2. Selection chart

## 3. Notes

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes $20 \%$ friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

We recommend ELEKTROMATEN FI with an integrated frequency inverter (page 1.101).
For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

## 4. Dimensions

4.1 SI 10.15 - SI63 25.15

SG63F

(1) Worm gear with safety brake
(2) Motor
(3) Limit switch
(4) Optional: WS 900 control panel, removable, with $0,8 \mathrm{~m}$ cable
(5) Hand crank NHK
(6) Floating foot

Right- or left-hand use
ELEKTROMATEN horizontal (as shown) or vertikal

1) Special version of ELEKTROMATEN with side thread is required 2) No use with SI 180.6

# ELEKTROMATEN® ${ }^{\circledR}$ SI 

Rapid Safedrive ${ }^{\circledR}$
For driving: High-speed sectional doors and high-speed rolling doors which require an anti-fallback device
"Rapid Safedrive ${ }^{\circledR}$ FI" ELEKTROMATEN SI are special drives for industrial doors which require an anti-fallback device. The patented safety brake is built into the gear. The drive unit is fitted directly to the door shaft.
Safedrive ${ }^{\circledR}$ ELEKTROMATEN comprises of:
Worm gear with safety brake and hollow shaft, emergency manual operator,
integrated limit switches and electrical motor.

## Patented built-in safety brake

- Safety against failure of worm or wheel
- Independent of speed / direction
- Maintenance free, self-monitoring

Excellent damping characteristics in operation

## Approvals and certificates

## ELEKTROMATEN

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

Built-in safety brake
Certificate of conformity according to:
DIN EN 12604 / 12605
ift Rosenheim GmbH

Limit switches
Mechanical limit NES

- 2 operating, 2 emergency- and 2 auxiliary limit switches

## Digital limit DES

- Absolute encoder, after a power failure, re-adjustment is not required

## Mounting

- Floating foot (standard fitting)
- Torque bracket

## Special versions

■ Increase of cycles per hour

- Higher protection class
- Other voltages and frequencies

Explosion-proof according to ATEX (page 6.011)
■ ELEKTROMATEN SI with built-on frequency inverter (page 1.101)

## Door controls

## (4)

Details of all GfA door controls can be found in Section 8.

- Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels
- Control voltage: 24 V
- Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
- Mains supply: $1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$

## 3. Notes

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 20 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

We recommend ELEKTROMATEN FI with an integrated frequency inverter (page 1.101).
For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

### 3.8 Cable / Cable drums

When calculating the cable size the max. permitted door weight is required with a safety of $6 x$ for the cables requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable

#### Abstract

drum must be at least $20 x$ the diameter of the cable.

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

Generally applies: IP65, permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$

1) See 3.5-2) Maximum torque that may act on the output shaft of the drive unit when the door is stationary. 3) We recommend the selection of GfA ELEKTROMATEN-FI for use with frequency inverter, OPEN drive speed at 87 Hz , see 3.7 -4) The operating current in door drives can reach up to 4 x the rated current for limited periods, see 3.6 and 3.7 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $3.2 \cdot 6$ ) Maximum revolutions of hollow shaft . 7) See 3.4

## 2. Selection chart

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 30 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

We recommend ELEKTROMATEN FI with an integrated frequency inverter (page 1.121).
For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

### 3.8 Cable / Cable drums

When calculating the cable size the max. permitted door weight is required with a safety of $6 x$ for the cables requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least 20x the diameter of the cable.

[^2]Select not mentioned drives as required by the door construction

- Suitable cable drums are available as accessories in Chapter 9

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 20 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a FIrther 20 \% for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.
The admissible closing speed shall be adjusted so that the operating forces must comply with EN 12453

### 3.7 Cable / Cable drums

When calculating the cable size the max. permitted door weight is required with a safety of $6 x$ for the cables requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least $20 x$ the diameter of the cable.

## 4. Dimensions

(1) Worm gear with safety brake
(2) Motor with built-on frequency inverter

## ELEKTROMATEN® SI FI

## Safedrive ${ }^{\oplus}$ with built-on frequency inverter

## For driving:

Roller shutters and rolling grilles Series SG186F which require an anti-fallback device
"Safedrive ${ }^{\circledR}$ FI" ELEKTROMATEN SI are special drives for industrial doors which require an anti-fallback device. The patented safety brake is built into the gear. The drive unit is fitted directly to the door shaft.
Safedrive ELEKTROMATEN SI FI comprises of:
Worm gear with safety brake and hollow shaft, emergency manual operator,
integrated limit switches and electrical motor with built-on frequency inverter.

## Patented built-in safety brake

- Safety against failure of worm or wheel
- Independent of speed / direction
- Maintenance free, self-monitoring

■ Excellent damping characteristics in operation

## Built-on frequency inverter to be used with

## door controls TS 970, TS 971 or TS 981

■ Individual adjustable output speed ${ }^{11}$

- The speed appears directly into the display - extra work to evaluate frequency and speed is not required
- Soft start and soft stop
- Automatic optimising of acceleration and deceleration speed
- Adjustable distance for acceleration and deceleration speed
- Individual adjustment and programming of all functions from the ground by a selector switch with digital display

## Approvals and certificates

## ELEKTROMATEN and FI-motors

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

## Built-in safety brake

Certificate of conformity according to: DIN EN 12604 / 12605
ift Rosenheim GmbH

| Emergency manual operation |
| :--- |
| Hand chain operator KNH |
| Limit switches |
| Digital limit DES |
| Absolute encoder, after a power failure, |
| re-adjustment is not required |

## Door controls

- Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels
Control voltage: 24 V
Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
Mains supply: $3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$

## Mounting

■ Floating foot
(Fitting requires a torque mount system)
Details of all GfA door controls can be found in Section 8.

## 1. Technical data

$\left.\begin{array}{|l|l|l|l|l|}\hline \begin{array}{l}\text { ELEKTROMATEN } \\ \text { Series }\end{array} & & \text { SI 260.12 FI } \\ \text { SG186F }\end{array}\right)$

Generally applies: Degree of protection IP65, permissible temperature range $+5^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level $\mathrm{SPL}\langle 70 \mathrm{~dB}(\mathrm{~A})$

1) See 3.6-2) See 3.5-3) Maximum torque that may act on the output shaft of the drive unit when the door is stationary - 4) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $3.2 \cdot 5$ ) Maximum revolutions of hollow shaft, other limit switch ranges on request $\cdot 6$ ) See 3.4

## 2. Selection chart

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 30 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further $20 \%$ for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and EN 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Locking torque / Holding torque

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

### 3.6 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.
The admissible closing speed shall be adjusted so that the operating forces must comply with EN 12453

## 4. Dimensions

SI 260.12 FI - SI 500.10 FI

- Permitted installation: Horizontal with an additional torque mount system, see 6

## 5. Emergency manual operation • for horizontal installation

## 6. Attachments / Accessories

## ELEKTROMATEN® KE <br> Chain-drive

for roller shutters, rolling grilles and vertical lifted doors. Protection of doors against falling back require a safety brake of the appropriate size

KE 9.24 - KE 120.24
Output torque: 90-1200 Nm Output speed: 24 rpm

KE 9.60 FI - KE 120.30 FI
2.031

Output torque: 90-1200 Nm Output speed: 5-80 rpm

## KE

# ELEKTROMATEN® KE 

ELEKTROMATEN KE are special drives for industrial doors. The door shaft is driven by a chain-transmission. Prevention of doors falling back requires a safety brake of the appropriate size.
ELEKTROMATEN KE comprises of:
Worm gear, interchangeable output-shaft, emergency manual operator, integrated limit switches and electrical motor.

## Output side

The interchangeable output-shaft allows easy modification from left- to right-hand use.

## Approvals and certificates

## ELEKTROMATEN

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

## Emergency manual operation

Hand crank NHK
Rapid hand chain operator SK (KE 9.24)
Hand chain operator KNH ( $\geqslant$ KE 20.24)

## Limit switches

Mechanical limit NES
$\square 2$ operating, 2 emergency- and 2 auxiliary limit switches
Digital limit DES
$\square$ Absolute encoder, after a power failure, re-adjustment is not required

## Mounting

$\square$ Foot angle (standard fitting)

- Bracket las an additional part or mounted directly on the ELEKTROMATEN)

## Separate Safety Brake FG

- Prevention of doors falling back
- Suitable Safety Brakes for all types of ELEKTROMATEN KE can be found in
Section 7.

## Special versions

- Increase of cycles per hour

■ Higher protection class

- Other voltages and frequencies
$\square$ Explosion-proof according to ATEX (page 6.021)
■ ELEKTROMATEN KE with built-on
frequency inverter (page 2.031)

## Door controls

- Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels
- Control voltage: 24 V
- Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
- Mains supply: $1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$

Details of all GfA door controls can be found in Section 8.

## 2. Selection chart • for Roller shutters

## 3. Notes

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 20 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further $20 \%$ for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Safety brake / Locking torque / Holding torque

For rising loads a safety brake of the appropriate size must be fitted. The admissible drive speeds for the safety brake may not be exceeded. The locking torque moment must not exceed the admissible loads on mechanical components such as e.g. fixings, shafts, keys etc.

### 3.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 3.7 Use with external frequency inverter

We recommend ELEKTROMATEN FI with an integrated frequency inverter (page 2.031).
For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

### 3.8 Chain drive

It is not allowed to exceed the admissible loads on chains, shafts, keys and bearings. Observe the direction of the power input.
We recommend the use of drive sprockets with at least 15 teeth. The drive sprocket must not protrude beyond the end of the output-shaft.
The chain drive transmission is to be fitted with tensioning devices designed to prevent the chain riding up or disengaging.

## 4. Dimensions

[^5]KE-ELEKTROMATEN FI are special drives for industrial doors. The door shaft is driven by a chain-transmission. Prevention of doors falling back requires a safety brake of the appropriate size.
KE-ELEKTROMATEN FI comprises of:
Worm gear with safety brake and hollow shaft, emergency manual operator, integrated limit switches and electrical motor with built-on frequency inverter.

## Output side

The interchangeable output-shaft allows easy modification from left- to right-hand use.

## Built-on frequency inverter to be used with control panels TS 970, TS 971 or TS 981

■ Individual adjustable output speed ${ }^{11}$

- The speed appears directly into the display - extra work to evaluate frequency and speed is not required
- Soft start and soft stop
- Automatic optimising of acceleration and deceleration speed
- Adjustable distance for acceleration and deceleration speed
- Individual adjustment and programming of all functions from the ground by a selector switch with digital display

Approvals and certificates

## ELEKTROMATEN and FI-motors

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

[^7]Includes $20 \%$ friction for single-wall profiles (profile thickness 20 mm )

## 3. Notes

### 3.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 3.2 Selection chart / Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.
The selection chart includes 20 \% friction for roller shutters with single-wall profiles (profile thickness 20 mm ) and $10 \%$ friction for sectional doors.
Reduce the weight by a further $20 \%$ for vertical lifted doors and insulated shutters with double walled, thick and/or deep sections. Do not calculate using the tube diameter. The highest torque will occur normally after 1-2 turns of the barrel from close.

### 3.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 3.4 Manual operation

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 3.3).

### 3.5 Safety brake / Locking torque / Holding torque

For rising loads a safety brake of the appropriate size must be fitted. The admissible drive speeds for the safety brake may not be exceeded. The locking torque moment must not exceed the admissible loads on mechanical components such as e.g. fixings, shafts, keys etc.

### 3.6 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.
The admissible closing speed shall be adjusted so that the operating forces must comply with EN 12453

### 3.7 Chain drive

It is not allowed to exceed the admissible loads on chains, shafts, keys and bearings. Observe the direction of the power input.
We recommend the use of drive sprockets with at least 15 teeth. The drive sprocket must not protrude beyond the end of the output-shaft.
The chain drive transmission is to be fitted with tensioning devices designed to prevent the chain riding up or disengaging.

## 4. Dimensions

4.1 KE 9.60 FI

(3) Limit switch
(4) Hand crank NHK
(5) Output-shaft (interchangeable)

6 Foot angle

Permitted installation: Horizontal (as shown) or vertical (motor at the bottom)

Permitted installation: Horizontal (as shown) or vertical (motor at the bottom)

## ELEKTROMATEN® SE

Sectional-door-drive

for counterbalanced sectional doors

SE 8.60 FI
3.005

Output torque: 80 Nm
Output speed: 12-60 $\mathrm{min}^{-1}$

SE 5.15 - SE 5.24 WS
3.011

SE 9.15 - SE 14.21
SE 6.65 DU
SE 6.80 FI/SE 14.80 FI
Output torque: 50-140 Nm
Output speed: 10-80 rpm
For non-counterbalanced sectional doors, we refer to chapter 1: ELEKTROMATEN SI Safedrive ${ }^{\circledR}$.

## SE

## ELEKTROMATEN® ${ }^{\text {SE }}$

## Sectional-door-drive

For driving:<br>Counterbalanced sectional doors

Series SG40

## SE 8.60 FI

ELEKTROMATEN SE are special drives for counterbalanced sectional doors. The drive unit is normally directly fitted to the door shaft. The SG40 series features an extremely compact one-box design (gearbox and motor in one housing). The weight of the drives is less than 10 kilograms. ELEKTROMATEN SE comprises of:
Worm gear with hollow shaft, emergency manual operator, integrated limit switch and electrical motor respectively electrical motor with built-on frequency inverter.

## Built-on frequency inverter <br> to be used with door controls TS 970, TS 971 or TS 981

■ Individual adjustable output speed ${ }^{11}$
$\square$ The speed appears directly into the display - extra work to evaluate frequency and speed is not required

- Soft start and soft stop
- Automatic optimising of acceleration and deceleration speed
- Adjustable distance for acceleration and deceleration speed
- Individual adjustment and programming of all functions from the ground by a selector switch with digital display

## Approvals and certificates

## ELEKTROMATEN

Type test according to:
DIN EN 12453
DIN EN 60335-
DIN EN 60335-2-103
TÜV NORD CERT GmbH

## Emergency manual operation <br> $\square$ Rapid hand chain operator SK with mounted shifter cable with standard <br> Limit switches <br> Digital limit DES 5 <br> - Absolute encoder, after a power failure, re-adjustment is not required

## Mounting

- Fitting threads 4xM8
$\square$ Two different torque brackets available

## Door controls

■ Single-plug connection system (XES) for fast commissioning without wiring effort (5) on the drive side
■ Control voltage: 24 V
Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$

- Mains supply: $1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}^{21}, 3 \mathrm{~N} \sim 400 \mathrm{~V}$

Details of all GfA door controls can be found in Section 8.

[^9]
## 1. Technical data

$\left.\begin{array}{|l|c|c|}\hline \begin{array}{l}\text { ELEKTROMATEN } \\ \text { Series }\end{array} & & \text { SE 8.60 FI } \\ \text { SG40 }\end{array}\right]$

Generally applies: Degree of protection IP65, permissible temperature range $+5^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level $\mathrm{SPL}\langle 70 \mathrm{~dB}(\mathrm{~A})$

1) See 2.7 - 2) See $2.5 \cdot 3$ ) One cycle consists of a complete opening and closing movement of the door. The value according to EN $60335-2-103$ is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $2.2 \cdot 4$ ) Maximum revolutions of hollow shaft

## 2. Notes

### 2.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 2.2 Cyles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

### 2.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 2.4 Manual operation / Counterbalancing

## SK rapid hand chain

Manual operation with NHK/SK operator, the door and selflocking gear construction remain inter-connected. There is no danger of a door crashing down, e.g. if a spring breaks.

### 2.5 Holding torque

Counterbalanced door leaves are prevented from falling down if the drive is capable of holding the weight of the leaf when the spring breaks. The holding capability is the admissible load bearing of the gear construction which can occur when the spring breaks.
Static stability Mstat is calculated as follows:
Mstat $[\mathrm{N}]=$ door weight $[\mathrm{N}] \times$ radius of the cable drum [m]

The greatest winding diameter should be taken into account in the case of conical cable drums are in use.
Since it is possible for two counterbalancing springs to fail simultaneously, the German technical committee, Structural equipment (FABE) recommends that the drive be dimensioned such that it can support.

- $100 \%$ of the doorweight with 1 or 2 counterbalancing springs
- $66 \%$ of the door weight with 3 counterbalancing springs
- $50 \%$ of the door weight with 4 counterbalancing springs

### 2.6 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.
The admissible closing speed shall be adjusted so that the operating forces must comply with EN 12453.

### 2.7 Cable / cable drums

When calculating the cable size the max. permitted door weight is required a calculated ultimate stress of $6 x$ for the cables; requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least $20 x$ the diameter of the cable.

## 3. Dimensions

## SE 8.60 FI

$\square$ Permitted installation: Horizontal (as shown)

## 4. Emergency manual operation

As standard, the drive units have a "rapid hand chain operator SK" with a 4 m long circulating chain (1). Activation takes place using a 0.2 m long shifter cable (2). The following options are possible:

- Extension of the emergency hand chain (3)

■ Extension of the shifter cable (4)

| Designation | Part. no. |  |
| :--- | :---: | :--- |
| Emergency hand chain set, 2 m | (3 | 30004555.00002 |
| Emergency hand chain set, 4 m | (3 | 30004555.00004 |
| Emergency hand chain set, 6 m | (3 | 30004555.00006 |
| Emergency hand chain set, 8 m | 3 | 30004555.00008 |
| Emergency hand chain set, 10 m | (3 | 30004555.00010 |
| Shifter cable extension $2 \times 4 \mathrm{~m}$ | 4 | 30003965 |
| Shifter cable extension $2 \times 7 \mathrm{~m}$ | 4 | 30004789 |
| Shifter cable extension $2 \times 10 \mathrm{~m}$ | (4) | 30004242 |
| Shifter cable as a spare part | (5 | 30005741.00020 |

## 5. Attachments / Accessories

The drive unit has a 25.4 mm hollow shaft (1). The positive-locking connection to the door shaft can be done via two separately available feather key versions (2+3).
Four M8 threaded holes (4) are available on the housing for mounting the drive unit. Two varying torque brackets (5+6) can be used for adaptation to the door design.

| Designation | Part no. |  |
| :--- | :--- | :--- |
| Key $6.35 \times 6.35 \times 115$ | 2 | 30005835 |
| Key $6.35 \times 9.525 \times 115$ | 3 | 30005836 |
| Torque bracket SG40 Type A | (5 | 30005807 |
| Torque bracket SG40 Type B | 6 | 30005808 |

(5)

6

## 6. Connection cables and electrical accessories

Details of all GfA door controls and further electrical accessories can be found in Section 8

## ELEKTROMATEN ${ }^{\ominus}$ SE

## Sectional-door-drive

For driving:
Counterbalanced sectional doors

ELEKTROMATEN SE are special drives for counterbalanced sectional doors. The drive unit is normally directly fitted to the door shaft. ELEKTROMATEN SE comprises of:
Worm gear with hollow shaft, emergency manual operator, integrated limit switches and electrical motor respectively electrical motor with built-on direct inverter (SE 6.65 DU) or frequency inverter (SE 6.80 FI/SE 14.80 FI).

Built-on direct inverter (SE 6.65 DU) or frequency inverter (SE $6.80 \mathrm{FI} / \mathrm{SE} 14.80 \mathrm{FI}$ )
to be used with door controls TS 970, TS 971 or TS 981
■ Individual adjustable output speed ${ }^{11}$
■ The speed appears directly into the display - extra work to evaluate frequency and speed is not required

- Soft start and soft stop
- Automatic optimising of acceleration and deceleration speed
- Adjustable distance for acceleration and deceleration speed
- Individual adjustment and programming of all functions from the ground by a selector switch with digital display

## Approvals and certificates

## ELEKTROMATEN and FI-motors

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH
Holding torque
Examination of the static holding torque
Test report 630900
TÜV SÜD Industrieservice GmbH

## Emergency manual operation

Hand crank NHK
Rapid hand chain operator SK
Gear release ER

## Limit switches

## Mechanical limit NES ${ }^{2]}$

- 2 operating, 2 emergency- and 2 auxiliary limit switches
Digital limit DES
- Absolute encoder, after a power failure, re-adjustment is not required

## Mounting

- Fitting thread $8 \times \mathrm{M} 8$ (standard fitting)
- Torque mount

■ Flange bracket

1) See 2.7 2) Not for SE 6.65 DU / SE $6.80 \mathrm{FI} / \mathrm{SE} 14.80 \mathrm{~F}$

## Special versions

- Increase of cyles per hour
- Higher protection class
- Other voltages and frequencies

Explosion-proof according to ATEX (page 6.031)

## Door controls

■ Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels
■ Control voltage: 24 V

- Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
- Mains supply:
$1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}^{31}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$
Details of all GfA door controls can be found in Section 8.

[^10]
### 2.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 2.2 Cyles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

### 2.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 2.4 Manual operation / Counterbalancing

## NHK hand crank / SK rapid hand chain

Manual operation with NHK/SK operator, the door and selflocking gear construction remain inter-connected. There is no danger of a door crashing down, e.g. if a spring breaks.

## Gear release ER

Manual operation of ER decoupling mechanism, the door and the self-locking gear construction are disconnected during manual operation. When the decoupling mechanism the gear no longer sustains the door and a separate safety brake is required.
The counter-balancing should be inspected at least once a year.

### 2.5 Holding torque

Counterbalanced door leaves are prevented from falling down if the drive is capable of holding the weight of the leaf when the spring breaks. The holding capability is the admissible load bearing of the gear construction which can occur when the spring breaks.
Static stability Mstat is calculated as follows:
Mstat $[\mathrm{N}]=$ door weight $[\mathrm{N}] \times$ radius of the cable drum [m]
The greatest winding diameter should be taken into account in the case of conical cable drums are in use.
Since it is possible for two counterbalancing springs to fail simultaneously, the German technical committee, Structural equipment (FABE) recommends that the drive be dimensioned such that it can support.

- $100 \%$ of the doorweight with 1 or 2 counterbalancing springs
- $66 \%$ of the door weight with 3 counterbalancing springs
- $50 \%$ of the door weight with 4 counterbalancing springs

### 2.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 2.7 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.
The admissible closing speed shall be adjusted so that the operating forces must comply with EN 12453.

### 2.8 Use with external frequency inverter

For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by $10 \%$ reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

### 2.9 Cable / cable drums

When calculating the cable size the max. permitted door weight is required a calculated ultimate stress of $6 x$ for the cables; requirement of EN 12604.
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least $20 x$ the diameter of the cable.

## 3. Dimensions

## ST

## ELEKTROMATEN® ${ }^{\ominus}$ ST

## Sliding-door-drive

ELEKTROMATEN ST are special drives for sliding-doors designed for industrial use.
ELEKTROMATEN ST comprises of:
Worm gear with integrated friction clutch, interchangeable output-shaft, magnetic brake (optional), emergency manual operation (optional),
integrated limit switch (optional), mounting accessories and electrical motor.

- Output side:

Available with left- or rightside outputshaft

- Friction clutch:

The integrated friction clutch guarantees impact-damped,
low-wear operation.
$\square$ Magnetic brake (optional):
Ensures precise positioning of the door limit position, slightly heating
ensures trouble-free operation at low outside temperatures.
■ Integrated limit switch (optional): No need of separate limit switches

## Approvals and certificates

## ELEKTROMATEN

Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103

## Emergency manual operation (optional)

■ E.g.: for top-hung sliding doors Hand crank NHK Hand chain operator KNH

## Limit switch integrated (optional)

## Mechanical limit NES

3
■ 2 operating, 2 emergency- and 2 auxiliary limit switches
Digital limit DES
■ Absolute encoder, after a power failure, re-adjustment is not required

## Separate limit switch (optional)

■ Roller-arm limit switch

- Inductive limit switch

## Mounting

- Foot angle (standard fitting)
- Mounting base

## Special versions

- Increase of cycles per hour
- Other voltages and frequencies
$■$ ST-TRK: Sliding-door ELEKTROMATEN with magnetic brake
ST-SI: Sliding-door ELEKTROMATEN with integrated safety brake, e.g. for sliding doors operating on an incline

## Door controls

■ Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels

- Control voltage: 24 V
- Frequency: $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$
- Supply voltage:
$1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$
Details of all GfA door controls for sliding doors can be found from page 4.021.

| Part no. ELEKTROMATEN |  | 10002993 | 10003340 | 10003259 | 10003374 | 10003195 |

Generally applies: Degree of protection IP54, permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, from $-20^{\circ} \mathrm{C}$ in combination with a permanently used magnetic brake, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$

1) See 2.6-2) Door speed when operated with standard chain wheel, see 5.3-3) We recommend the selection of a special ELEKTROMATEN (enquire) for use with frequency inverter, OPEN drive speed at 87 Hz , see 2.6 and 2.7 - 4) The operating current in door drives can reach up to 4 x the rated current for limited periods, see 2.7 and 2.8 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also 2.2 .6) Maximum possible revolutions of output-shaft with integrated limit switch, see 2.9

### 2.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 2.2 Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

### 2.3 Magnetic brake

The optional magnetic brake locks the output-shaft when the motor is switched off. The magnetic brake ensures precise positioning of the door in the limit position and avoids overrunning the limit position of the door. Slight heating ensures trouble-free operation at low outside temperatures.

### 2.4 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 2.5 Manual operation

In the event of power failure, the door can be opened by hand after releasing the friction clutch. Emergency manual operation by crank handle or chain is also available as an option (e.g. for top-hung sliding doors).

### 2.6 Output torque / Door weight / Friction clutch

The integrated slipping clutch guarantees impact-damped,lowwear operation. The admissible output torque is pre-adjusted. If the clutch is subject to higher forces than the admissible (e.g. the possibility of attempted forced entry) additional improvements of the door design may be required to prevent undesired opening of the door. The weights indicated apply to horizontal, rail-mounted sliding doors.

### 2.7 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 2.8 Use with external frequency inverter

For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque..
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ of the operating motor current.

### 2.9 Integrated limit switch

The door construction should be designed to prevent the disengaging of drive elements (sprocket, chain, rack etc.).
The stopping accuracy of the ELEKTROMATEN ST with magnetic brake and a limit switch range of E20 is approximately +/- 15 mm (for E40, approx. +/- 25 mm ). The door construction must be designed to compensate onsite these differences (e.g. height- of the rubber profile of the safety edge).

For higher requirements regarding stopping accuracy, we recommend the use of separate limit switches (roller-arm limit switches, inductive limit switches, etc.).

## Door controls for ELEKTROMATEN ${ }^{\circledR}$ ST

## WS 905 - Reversing contactor control

## Technical data

- Suitable for ELEKTROMATEN ST with NES mechanical limit switch
- Supply voltage:
$1 \mathrm{~N} \sim 230 \mathrm{~V}$, PE
3~230 V, PE
$3 \mathrm{~N} \sim 400 \mathrm{~V}$, PE
- Control voltage: 24 V AC
- 2 reversing contactors
- Permissible temperature range: $-10^{\circ} \mathrm{C} \ldots+50^{\circ} \mathrm{C}$

## Housing

- Dimensions W $\times \mathrm{H} \times \mathrm{D}$ [mm]: $145 \times 101 \times 209$
■ Protection class: IP54

Design
Mechanically locked reversing contactors

- Positioning button CLOSE/OPEN
$\square$ Plug-in connection cable to ELEKTROMATEN for configuration with integrated mechanical limit switch NES
- Available with optional readywired CEE plug, regarded as mains circuit breaker under the terms of EN 12453

## Functions

Operating mode: Hold to run CLOSE/OPEN via an external control device

## TS 400 - Automatic door control

## Technical data

- Suitable for ELEKTROMATEN ST with DES digital limit switch or NES mechanical limit switch
- Supply voltage: 1N~230 V, PE / 3~230 V, PE / 3N~400 V, PE
- Control voltage: 24 V DC
- Mains supply ratings for external devices: 24 V DC ( 0.5 A ) / 230 V AC (1 A)
$\square 2$ integrated reversing contactors (up to 3 kW motor power)
- Display for programming (2 lines with 20 signs)

■ Permissible temperature range: $-10^{\circ} \mathrm{C} \ldots+50^{\circ} \mathrm{C}$

## Housing

$\square$ Synthetic housing with transparent cover, Dimensions WxHxD [mm]: $230 \times 300 \times 85$

- Protection class: IP55

## Design

■ Plugged terminals with screw connections

- Pluggable cable sets to the ELEKTROMATEN with DES or NES
■ Integrated push buttons for the adjustment of the door positions in use with DES
- Connectors for 3 control devices (2 for the door area, 1 for gatekeeper operation)

## Functions

- Automatic detection of DES or NES limit switches
- Intermediate open position for passengers (for use with NES is an additional limit switch required)
- Settings via selector switch with digital display
- Adjustment of the door final positions and intermediate positions from the operator level (DES)
- Self-hold in both directions, in case of failure automatic switching to Hold to run mode
■ Safety edge system 8 k 2 , evaluation for 6 safety edges
- Connection plugs for control devices with next function (pull switch or external radio receiver)
- Integrated timer with week program, OFF via external switch
- Automatical run time monitoring (real runtime + 8 \%)
- Automatic closing feature adjustable (2-999 s), adjustable in steps of 2 seconds
- Possibility of adjustable clearance time (1-99 s)
■ Separated adjustment of the automatic closing function for complete- or partially opening
- Adjustable function of the traffic lights in the final door positions or the clearance time
- Adjustable reaction of the photo cell in the final limit position OPEN
- Fault memory
- Cycle counter (non-resettable) and maintenance cycle counter
- Modul with 3 Relays for the final door positions and faults, etc. (potential free)

## Door controls and accessories

| Designation |  |  | Description | Part no. |

1) Discontinued part

FT 60.4 - FT 80.5 FI
Output torque: $600-800 \mathrm{Nm}$
Output speed: 0,5-5 rpm

## FT

## Folding-door-drive-ELEKTROMATEN ${ }^{\circledR}$ FT

FT 60.4
FT 80.2
FT 80.5 FI

ELEKTROMATEN FT are special drives for industrial folding doors.
The door is driven by a torque arm.
ELEKTROMATEN FT comprises of:
Two-step reduction worm gear, emergency manual operation with gear release, integrated limit switches and electrical motor respectively electrical motor with built-on frequency inverter (FT 80.5 FI).

## Built-on frequency inverter (FT 80.5 FI ) to be used with door control TS 981-FT:

■ Individual adjustable output speed ${ }^{11}$

- The speed appears directly into the display - extra work to evaluate frequency and speed is not required
Soft start and soft stop
- Automatic optimising of acceleration and deceleration speed
- Adjustable distance for acceleration and deceleration speed
- Individual adjustment and programming of all functions from the ground by a selector switch with digital display

## Approvals and certificates

ELEKTROMATEN and FI-motors
Type test according to:
DIN EN 12453
DIN EN 60335-1
DIN EN 60335-2-103
TÜV NORD CERT GmbH

## Emergency manual operation

- Gear release ER
- Gear release lever with cable FB loptional)

## Limit switch

Mechanical limit NES ${ }^{2}$
$\square 2$ operating, 2 emergency- and 2 auxiliary limit switches
Digital limit DES
■ Absolute encoder, after a power failure, re-adjustment is not required

## Mounting / Output drive

$\square$ Mounting base (standard fitting)
Galvanized torque arm

1) See 27
2) Not for FT 80.5 FI
3) For FT 80.5 FI, use additional adaptor part no. 30005855

## Special versions

(1) Increase of cycles per hour
(2) Higher protection class
$\square$ Other voltages and frequencies

## Door controls

■ Simple connection by means of noninterchangeable plug connections allowing simple exchange with other GfA control panels
■ Control voltage: 24 V

- Frequency: 50 / 60 Hz
- Supply voltage: $1 \mathrm{~N} \sim 230 \mathrm{~V}, 3 \sim 230 \mathrm{~V}^{31}, 3 \mathrm{~N} \sim 400 \mathrm{~V}, 3 \sim 400 \mathrm{~V}$

Details of all GfA door controls can be found in section 8 . Further door controls on request.

## 1. Technical data

$\left.\begin{array}{|l|c|c|c|c|}\hline \begin{array}{l}\text { ELEKTROMATEN } \\ \text { Series }\end{array} & & \text { FT } 60.4 \\ \text { SG50R-SG85 }\end{array}\right)$

Generally applies: Degree of protection IP65 (combined with WS 900: IP54), permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right) \rightarrow \mathrm{FT} 60.4 / \mathrm{FT} 80.2,+5{ }^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$ $\rightarrow$ FT 80.5 FI, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$
$\overrightarrow{11}$ See2.5-2)See2.4-3)WerecommendtheselectionofaspecialGfAELEKTROMATEN-Flforusewithfrequencyinverter,OPENdrivespeedat 87 Hz (notapllicableforFT80.5FI), see 2.7.
4) The operating current in door drives can reach up to $4 x$ the rated current for limited periods, see 2.6 and 2.8 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN $60335-2-103$ is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $2.2 \cdot 6$ ) Maximum revolutions of the torque arm

## 2. Notes

### 2.1 European directive

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

### 2.2 Cycles per hour

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range $+40^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$, the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

### 2.3 Gear self-braking / Brake

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

### 2.4 Manual operation / restoring torque

When moving the lever the door is unlocked, and the controlpower supply is interrupted. The door can be opened by hand. The restoring torque values indicated here (see Technical data) must be exceeded in this case.

### 2.5 Holding torque / Slipping clutch

The factory-adjusted slipping clutch produces the indicated holding torque. If the clutch is subject to higher forces than the admissible (e.g. from wind) additional improvements of the door design may be required to prevent undesired opening of the door.

### 2.6 Motor overload protection

Motor overload protection must be able to withstand $4 x$ the operating motor current because the starting current of the drive unit can reach these levels for short periods.

### 2.7 Output speed

The maximum admissible speed is dependent on the door construction and type of the door. All materials must be designed to be used for doors with higher speeds.

### 2.8 Use with external frequency inverter

For external frequency inverters applies:
A higher than recommended drive speed puts extra load onto the gear. This extra load must be taken into account when sizing a drive by reducing the available output torque.
Increasing the drive speed by 10 \% reduces the admissible drive torque by $5 \%$. In the case of higher drive speeds reduce the drive torque accordingly (enquire if necessary).
The admissible drive speeds may not be exceeded (see Technical data). The operating forces must comply with EN 12453, and the corresponding EMC directives must likewise be observed.
If selecting a frequency inverter, note that the starting current of the drive unit can reach $4 x$ the operating motor current.

## 3. Dimensions

### 3.1 FT 60.4 / FT 80.2

## SG50R-SG85

(1) Worm gear 1 reduction with integrated slipping clutch
(2) Worm gear 2 reduction
(3) Motor
(4) Limit switch
(5) Gear release ER

Gear release lever with cable FB (optional)
(7) Torque arm

8 Optional:
WS 900 door control, removable, with 0,8 m cable
(9) Mounting base

### 3.2 FT 80.5 FI

SG50R-SG85

(1) Worm gear 1 reduction with integrated slipping clutch
(2) Worm gear 2 reduction
(3) Motor with built-on frequency inverter
(4) Limit switch
(5) Gear release ER
(6) FB gear release lever with cable (optional)
(7) Torque arm

Mounting base

## 4. Slipping clutch and emergency manual operation

The drives have a slipping clutch ( $\mathbf{0}$ ) as standard for overload protection. The slipping clutch is set to the output torque at the factory. The gear release ER (©) that is also standard is intended for opening or closing the gate without electrical energy supply.
The gearbox can be unlocked from the operating height with the additionally available gear release lever with cable (©).

| Designation |  | Part no. |
| :--- | :--- | :--- |
| Slipping clutch | 1 | Standard |
| Gear release ER | $\mathbf{2}$ | Standard |
| Gear release lever with cable FB $(8 \mathrm{~m})$ | $\mathbf{3}$ | 20001925 |

Generally applies: Degree of protection IP65, operating sound pressure level SPL ‘70 dB(A)
1) See 2.5-2) Maximum torque that may act on the output shaft of the drive unit when the door is stationary - 3) See 2.6-4) One cycle consists of a complete opening and closing movement of the door. The value according to \(\mathrm{EN} 60335-2-103\) is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also \(2.2 \cdot 5\) ) Maximum revolutions of the output shaft / hollow shaft; optional limit switch ranges are listed in brackets ( \(\rightarrow\) change in cycles per hour) -6) See 2.4

\section*{2. Notes}

\subsection*{2.1 European directive}

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

\subsection*{2.2 Cyles per hour}

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range \(+40^{\circ} \mathrm{C}\) to \(+60^{\circ} \mathrm{C}\), the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

\subsection*{2.3 Gear self-braking / Brake}

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

\subsection*{2.4 Manual operation}

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 2.3).

\subsection*{2.5 Locking torque / Holding torque}

The permissible loads on walls, fastenings, mountings and transmission elements must not be exceeded, even for maximum holding torques or locking torques.

\subsection*{2.6 Motor overload protection}

Drives for use in explosion protected zones have to be protected against overload, short circuits and phase failures lin three-phase systems). The motor protection switch has to be integrated in an external motor door control. The motor protection switch has to be adjusted in match to the operating current of the motor.

Generally applies: Degree of protection IP65 (KE 9.24 Ex-de T4: IP55), operating sound pressure level SPL «70 dB(A)
1) Maximum torque that may act on the output shaft of the drive unit when the door is stationary - 2) See 2.6 3) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also \(2.2 \cdot 4\) ) Maximum revolutions of the output shaft / hollow shaftt; optional limit switch ranges are listed in brackets ( \(\rightarrow\) change in cycles per hour) 5) Other limit switch ranges on request • 6) See 2.4

\section*{2. Notes}

\subsection*{2.1 European directive}

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

\subsection*{2.2 Cyles per hour}

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range \(+40^{\circ} \mathrm{C}\) to \(+60^{\circ} \mathrm{C}\), the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

\subsection*{2.3 Gear self-braking / Brake}

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

\subsection*{2.4 Manual operation}

In accordance with EN 12453 and 12604 hand force up to 390 N is permissible. For large, heavy doors, manual operation is only used for closing the door. In the case of drive units with an electric brake; emergency manual operation is carried out against the closed brake (Read note in 2.3).

\subsection*{2.5 Safety brake / Locking torque/Holding torque}

For rising loads a safety brake of the appropriate size must be fitted. The admissible drive speeds for the safety brake may not be exceeded. The locking torque moment must not exceed the admissible loads on mechanical components such as e.g. fixings, shafts, keys etc.

\subsection*{2.6 Motor overload protection}

Drives for use in explosion protected zones have to be protected against overload, short circuits and phase failures lin three-phase systems). The motor protection switch has to be integrated in an external motor door control. The motor protection switch has to be adjusted in match to the operating current of the motor.

\subsection*{2.7 Chain drive}

It is not allowed to exceed the admissible loads on chains, shafts, keys and bearings. Observe the direction of the power input.
We recommend the use of drive sprockets with at least 15 teeth. The drive sprocket must not protrude beyond the end of the output-shaft.
The chain drive transmission is to be fitted with tensioning devices designed to prevent the chain riding up or disengaging.

\section*{3. Dimensions}

TÜV SÜD Industrieservice GmbH
ATEX - Registration number
Registration number:
8000306986
TÜV NORD CERT GmbH

- 2 operating, 2 emergency- and 2 auxiliary limit switches

Terminal box

\section*{Mounting}
- Fitting thread \(8 \times \mathrm{M} 8\) (standard fitting)
- Torque mount

■ Flange bracket

\section*{Electrical accessories}
(1) For ELEKTROMATEN in potentially explosive atmospheres:
- Door control
- Evaluators - Push buttons etc.

Details of all GfA door controls to be used in in potentially explosive atmospheres can be found from page 6.051.

\section*{1. Technical data}

Generally applies: Degree of protection IP65 (SE 9.24 Ex-de T4: IP55), operating sound pressure level SPL <70 dB(A)
1) Additional outputshafts / hollow shafts ( \(\varnothing\) ) on request. 2) See 2.5 .3) See 2.6.4) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also \(2.2 \cdot 5\) ) Maximum revolutions of the output shaft / hollow shaftt; optional limit switch ranges are listed in brackets ( \(\rightarrow\) change in cycles per hour)

\section*{2. Notes}

\subsection*{2.1 European directive}

In accordance with the product standard EN 13241 Doors- and EN 12453 Safety in use of power operated doors-Requirements.

\subsection*{2.2 Cyles per hour}

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range \(+40^{\circ} \mathrm{C}\) to \(+60^{\circ} \mathrm{C}\), the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

\subsection*{2.3 Gear self-braking / Brake}

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

\subsection*{2.4 Manual operation / Counterbalancing}

Manual operation with NHK hand crank, the door and selflocking gear construction remain inter-connected. There is no danger of a door crashing down, e.g. if a spring breaks.
The counter-balancing should be inspected at least once a year.

\subsection*{2.5 Holding torque}

Counterbalanced door leaves are prevented from falling down if the drive is capable of holding the weight of the leaf when the spring breaks. The holding capability is the admissible
load bearing of the gear construction which can occur when the spring breaks.
Static stability Mstat is calculated as follows:
\(M[N]=\) door weight \([\mathrm{N}] \times\) radius of the cable drum [m]
The greatest winding diameter should be taken into account in the case of conical cable drums are in use.
Since it is possible for two counterbalancing springs to fail simultaneously, the German technical committee, Structural equipment (FABE) recommends that the drive be dimensioned such that it can support.
- \(100 \%\) of the doorweight with 1 or 2 counterbalancing springs
- \(66 \%\) of the door weight with 3 counterbalancing springs
- \(50 \%\) of the door weight with 4 counterbalancing springs

\subsection*{2.6 Motor overload protection}

Drives for use in explosion protected zones have to be protected against overload, short circuits and phase failures lin three-phase systems). The motor protection switch has to be integrated in an external motor door control. The motor protection switch has to be adjusted in match to the operating current of the motor.

\subsection*{2.7 Cable / Cable drums}

When calculating the cable size the max. permitted door weight is required with a safety of \(6 x\) for the cables; requirement of EN 12604
Cable drum selection - ensure that two turns of the cable remain on the drum at all times. The diameter of the cable drum must be at least \(20 x\) the diameter of the cable.

\section*{3. Dimensions}

(1) Worm gear
(2) Motor Ex-e T3
(3) Limit switch
(4) Terminal box (mountable on both sides)
(5)
Hand crank NHK

Permitted installation: Horizontal (as shown) or vertical (motor at the bottom or at the top)

\section*{4. Attachments / Accessories for ELEKTROMATEN SE}

See section 3 - ELEKTROMATEN SE

\section*{Door controls / electrical accessories}

\section*{for ELEKTROMATEN comply to ATEX}

ATEX door controls by GfA are designed for the special requirements of potentially explosive atmospheres. Depending on the version, they may be used inside (0) or outside (©/®) the Ex area.

\section*{All door controls supplied with:}
- Mains switch/isolator

- Motor overload protection
- Settings via selector switch with digital display
- Change of rotating direction from control panel push buttons
- Status and information display
- Cycle counter

■ Maintenance cycle counter: 1.000-99.000 cycles
- Supply voltage:

3~230 V, PE / 3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Control voltage: 24 V DC
- Mains supply ratings for external devices: 24 V DC ( 0,35 A) / 230 V AC ( 1,6 A)
- Without connection cable

\section*{Accessories}

\section*{ELEKTROMATEN \({ }^{\ominus}\) FS}

Fire-door-drive
FS 15.20
FS 25.20
FS 50.20
For driving: fire shutters which must close under
FS 110.18 their own weight in the case of fire

ELEKTROMATEN FS are special drives for fire shutters. The door shaft is driven by a chain-transmission. For rising loads a safety brake of the appropriate size must be fitted.
ELEKTROMATEN FS comprises of:
Spur gear, centrifugal brake, reversible universal brake \({ }^{11}\), integrated limit switches and electrical motor.

\section*{Spur gear}

The spur gear allows the doors to close under their own weight in the case of a fire, even if there is a power failure.

\section*{Centrifugal brake ©}

The centrifugal brake limits output speed in the case of a fire with power failure; the output speed in this case exceeds the normal operation output speed.

Patented universal brake \({ }^{11}\) with two switchable operation modes:
Installation mode 2
■ The operation corresponds to that of a spring-loaded brake \({ }^{2]}\)
- The door can be operated with a suitable door control like a standard roller shutter

\section*{Fire-protection mode ©}
- The operation corresponds to that of a magnetic brake \({ }^{3)}\)
- Operation as fire-door with VdS approval

■ In the case of fire the universal brake opens and the door closes under the own weight.

\end{tabular}

Generally applies: Degree of protection IP54, permissible temperature range \(-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)\), operating sound pressure level \(\mathrm{SPL}<70 \mathrm{~dB}(\mathrm{~A})\)
1) See 2.4-2) See 2.7-3) Maximum torque that may act on the output shaft of the drive unit when the door is stationary . 4) The max. current in door drives can reach up to \(4 x\) the rated operating current for limited periods, see 2.5-5) One cycle consists of a complete opening and closing movement of the door. The value according to EN \(60335-2-103\) is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also \(2.2 \cdot 6\) ) Maximum revolutions of the output shaft; optional limit switch ranges are listed in brackets ( \(\rightarrow\) change in cycles per hour)

\section*{2. Notes}

\subsection*{2.1 European directive}

In accordance with the product standard EN 16034 Doors- and EN 12453 Safety in use of power operated doors-Requirements.
Relevant local and national regulations also apply to doors used for fire-protection purposes.

\subsection*{2.2 Selection chart/Cycles per hour}

The specified cycles per hour (see technical data) apply to even distribution and the limit switch range first mentioned. When using the temperature range \(+40^{\circ} \mathrm{C}\) to \(+60^{\circ} \mathrm{C}\), the specified value must be halved. For other limit switch ranges, the values must be converted accordingly.

\subsection*{2.3 Gear self-braking/Brake}

Drives without an electric brake have a self-sustaining worm gear and stop automatically.
On drives with an electric brake, stopping is achieved by the external brake. Brake inspection must always be carried out by qualified service engineers.

\subsection*{2.4 Safety brake}

For rising loads a safety brake of the appropriate size must be fitted.
The admissible drive speeds for the safety brake may not be exceeded. The locking torque moment must not exceed the admissible loads on mechanical components such as e.g. fixings, shafts, keys etc.

\subsection*{2.5 Motor overload protection}

Motor overload protection must be able to withstand \(4 x\) the operating motor current because the starting current of the drive unit can reach these levels for short periods.

\subsection*{2.6 Chain drive}

It is not allowed to exceed the admissible loads on chains shafts, keys and bearings. Observe the direction of the power input.
We recommend the use of drive sprockets with at least 15 teeth. The drive sprocket must not protrude beyond the end of the output-shaft.
The chain drive transmission is to be fitted with tensioning devices designed to prevent the chain riding up or disengaging.

\subsection*{2.7 Restoring torque}

The restoring torque values indicated (See item - 1. Technical data) must be applied to the door assemply in its open position in order to ensure that the door can be closed in the case of fire with power failure.

\section*{4. Dimensions}

From 2022, ELEKTROMATEN FS will have new connecting dimensions. Intermediate plates (6) available as an option allow the installation of the new drive units on
doors with the old connecting dimensions. When using the intermediate plates, the centre distance ( \(\mathbf{B}\) ) between the output shaft and the door shaft increases slightly.

\subsection*{4.1 FS 15.20}

(1) Spur gear
(2) Centrifugal brake
(3) Motor
(4) Magnetic brake
(5) Limit swich
(6) Intermediate plate

B Axis offset with intermediate plate
- Permitted installation: Horizontal (as shown)

Part no. 40020009

For chain and sprockets, the maximum permitted torque \(M_{a b}\) on ELEKTROMATEN is as shown in the table (safety factor \(6 x\) the breaking strain)

\section*{Safety brakes FG}

For doors which require an anti-fallback device
in combination with ELEKTROMATEN \({ }^{\circledR}\) KE

FG 40-30 - FG 120-50
7.011

Max. torque: 400-1200 Nm
FG 220-60 - FG 360-80
Max. torque: 2200-3600 Nm

\section*{FG}

\section*{Safety brakes FG}

\section*{General description}
- Compact design with the same outer dimensions for all sizes

■ Visual indication of the triggering mechanism provided by a plunger:
(A) = Operating position

B = Braking position
- Max. operating speed OPEN up to 45 rpm
- Switch for safety circuit in protection class IP65
- Floating foot for horizontal installation
- Dependent on the direction of rotation
- Maintenance-free and self-controlling

\section*{Description of functions}

■ Locking catch and locking wheel (triggering mechanism) trigger the
 braking action if the max. operation speed is exceeded
- The special tooth geometry of the ratchet wheel reduces reaction time and thus the braking distance.
- The structure is only subject to extremely low braking moments.

\section*{Approvals and certificates}

Door weights in N
Extract from TÜV-reports

\section*{4. Notes}

\subsection*{4.1 European directive}

In accordance with the product standard EN 13241 Doors and EN 12453 Safety in use of power operated doors-requirements to be observed.

\subsection*{4.2 Locking torque}

The locking torque must not exceed the admissible loads on mechanical components such as fixing elements, shafts, keys etc.

\section*{Safety brakes FG}

\section*{General description}
- Compact design with the same outer dimensions for all sizes
- Visual indication of the triggering mechanism provided by a plunger:
(A) = Operating position

B = Braking position
- Max. operating speed OPEN up to 27 rpm

■ Switch for safety circuit in protection class IP65
- Floating foot for horizontal installation
- Dependent on the direction of rotation
- Multiple use because of the replaceable damping plates possible
- Maintenance-free and self-controlling

\section*{Description of functions}

■ The release apparatus consist of the pawl and ratchet wheel. If the operation speed is exceeded, the pawl grips into the teeth of the ratchet wheel and releases the catching act. The control voltage will then be interrupted.
■ The special tooth geometry of the ratchet wheel reduces reaction time, and thus the braking distance.
- The released energy is absorbed by the damping plates. Because of the excellent damping characteristics while catching, the structure is only subject to extremely low braking moments.

\section*{Approvals and certificates}

Certificate of conformity to DIN EN 12604/12605
Test report: 24043819
ift Rosenheim GmbH

\section*{(A) Operating position}

\section*{Door controls TS}

\section*{TS}

\section*{Overview \\ GfA door controls}
for GfA ELEKTROMATEN \({ }^{\circledR}\) drives
with DES digital limit switch or NES mechanical limit switch

1) With lighting system that prompts operator
2) Relay contact can be used as a traffic-light or as a potential-free contact
3) Additional five contacts available (via auxiliary SMF module)
4) Traffic-lights -Inside/Outside- for traffic control
5) UBS universal command sensor system (see S. 8.091)
6) Only for versions with a control voltage of 24 V
7) Variants with \(0,35 \mathrm{~A}\) or 1 A available
8) Wireless Safety Device - replaces the spiral cable
9) Function only via optional module available
10) RWA (smoke and heat extraction function)

\section*{WS 900 door control}

Reversing contactor control for GfA ELEKTROMATEN \({ }^{\circledR}\) drives
with NES mechanical limit switch

\section*{Approvals and certificates}

\section*{WS 900}

Type test according to:
DIN EN 12453
DIN EN 60335-1
TÜV NORD CERT GmbH

\section*{WS 900}

\section*{Technical data}
- For GfA ELEKTROMATEN with mechanical limit switch NES
- Supply voltage:

1 N~230 V, PE / 3~230 V, PE
3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Control voltage: 24 V AC
- 2 or 3 contactors
- Mains supply ratings for external devices: 24 V AC (1 A)
\(\square\) Permissible temperature range: \(-10^{\circ} \mathrm{C} \ldots+50^{\circ} \mathrm{C}\)

\section*{Housing}

Dimensions W xH xD [mm]: \(145 \times 101 \times 209\)
- Protection class IP54, IP65 (optional)

Part no. installation drawing: 50001883

\section*{Description}
- Mechanically inter-locked reversing contactors, optional with additional safety contactor - Integrated push-button OPEN-STOP-CLOSE onthe board
- For quick adjustment of the final limit positions directly on the drive unit
\(\square\) Plug-in connection cable to ELEKTROMATEN
- Available with optional readywired CEE plug, replaces mains switch according to EN 12453

\section*{Functions}
- Selectable operating mode:
- CLOSE/OPEN in hold-to-run mode
- CLOSE in hold-to-run mode/OPEN in self-hold mode
- Self-hold CLOSE/OPEN in conjunction with:

Control unit 647 for optical safety edge (see 9.005)
\(\square\) Slack-rope and pass-door switch input available
\(\square\) Possible connections for: push-button, emergency stop-switch, radio control, etc.

\section*{TS 959 door control}

Hold-to-run control panel for GfA-ELEKTROMATEN \({ }^{\circledR}\) drives with DES digital limit switch or NES mechanical limit switch

\section*{Approvals and certificates}

TS 959
Type test according to:
DIN EN 12453 DIN EN 12978
DIN EN 60335-1
DIN EN 60335-2-103
DIN EN ISO 13849-1 TÜV NORD CERT GmbH

TS 959 - Hold-to-run control panel for DES / NES limit switches

\section*{Technical data}
- For GfA ELEKTROMATEN \({ }^{11}\) drives with DES or NES
- Supply voltage:

1 N~230 V, PE / 3~230 V, PE / 3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Mains supply ratings for external devices: 230 V AC (1.6A)
\(\square\) Permissible temperature range: \(-10^{\circ} \mathrm{C} \ldots+50^{\circ} \mathrm{C}\)

\section*{Housing}
- Dimensions W xHxD [mm]: \(155 \times 386 \times 90\left(118^{21)}\right.\)
- IP65 rated when hard wired or IP54 if CEE plug used
\(\square\) Protection against contact provided by covers for live parts
\(\square\) Connection cable that plugs into the ELEKTROMATEN unit, insertable from below or above

\section*{Design}
- Integrated OPEN-STOP-CLOSE control device
- Safety reversing contactor (with 2 independent shutdown options)
- Settings via selector switch with digital display
- Pluggable connection technology
- Connection cable running to ELEKTROMATEN available in various lengths
\(\square\) Independent, programmable relay contact, e.g. usable for green traffic-lights or ramp enabling
- Slack-rope and pass-door plug-in connection points

\section*{Accessories}

Mains switch/isolator
- Emergency STOP switch
- Key switch
- For description and details on further accessories, see 8.039

\section*{Functions}
- Automatic detection of DES or NES limit switches
- Change of rotating direction from control panel push buttons
\(\square\) Adjustment of limit positions (only DES) and all functions from the operator level
1) The door control TS 959 is not suitable for drive units with frequency inverters (ELEKTROMATEN FI).
2) Version with mains switch

Selectable operating mode:
- CLOSE/OPEN in hold-to-run mode
- CLOSE in hold-to-run mode/OPEN in self-hold mode
- Hold to run FULLY CLOSE FUNCTION/self-hold OPEN Keep the CLOSE button pressed until the door is completely CLOSED. If the CLOSE button is released early, the door will reverse automatically to its OPEN position.
- Status and information display lincluding display of 6 most-recent faults); extended evaluation by using optionally available GfA-Stick (see 8.039)
\(\square\) Cycle counter (non-resettable)
- Maintenance-cycle counter:
- Setting range: 1,000-99,000 cycles
- Display indication or switch to hold-to-run operation once the maintenance-cycle limit is reached
- Detects door/drive blockage (only DES); in this event the control deactivates the drive unit
Dynamic run time monitoring (only NES):
- With every door movement, the time taken to run between the end positions is measured and compared with the most-recently set reference duration
- If the run duration is increased (pre-settable deviation), the control panel is deactivated
\(\square\) Settable force monitoring in OPEN direction (only DES):
- For counterbalanced doors, sudden changes to the counter-balancing are detected
- Self-learning feature and consequently no activation of force monitoring function due to,
e.g., a change in spring tension

Part no. installation drawing: 50001664

\section*{TS 970 door control}

Automatic control panel for GfA ELEKTROMATEN \({ }^{\circledR}\) drives
with DES digital limit switch or NES mechanical limit switch

\section*{Approvals and certificates}

TS 970
Type test according to:
DIN EN 12453 DIN EN 12978
DIN EN 60335-1
DIN EN 60335-2-103
DIN EN ISO 13849-1 TÜV NORD CERT GmbH

TS 970 - Automatic control panel for DES / NES limit switches

\section*{Technical data}
- For GfA ELEKTROMATEN drives with DES or NES
- Supply voltage:

1 N~230 V, PE / 3~230 V, PE / 3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Control voltage: 24 V DC
- Mains supply ratings for external devices: 24 V DC ( 0.18 A) / 230 V AC (1.6 A)

■ Permissible temperature range: \(-10^{\circ} \mathrm{C} . .+50^{\circ} \mathrm{C}\)

\section*{Housing}

Dimensions W xHxD [mm]: \(155 \times 386 \times 90\left(118^{11)}\right.\)
- IP65 rated when hard wired or IP54 if CEE plug used
- Protection against contact provided by covers for live parts
Top and botton entry for ELEKTROMATEN connection cables

\section*{Design}
- Integrated OPEN-STOP-CLOSE control device
- Safety reversing contactor (with 2 independent shutdown options)
- Settings via selector switch with digital display
- Pluggable connection technology
- Connection cable running to ELEKTROMATEN available in various lengths
■ Independent, programmable relay contact, e.g. usable for red or green traffic-lights or dock leveller enabling
- UBS \({ }^{21}\) module for the simple connection of control devices, photo cells, etc. (for details on UBS accessories, see 8.091)
- Slack-rope and pass-door plug-in connection points

\section*{Accessories}
- Mains switch/isolator
- Emergency STOP switch

Key switch
For description and details on further accessories, see 8.069

\section*{Functions}
\(\square\) Automatic detection of DES or NES limit switches
- Change of rotating direction from control panel push buttons
Adjustment of limit positions (only DES) and all functions from the operator level
- Selectable operating mode:
- CLOSE/OPEN in hold-to-run mode
- CLOSE in hold-to-run mode/OPEN in self-hold mode
- Hold-to-run operation with active safety edge system
- CLOSE/OPEN in self-hold mode
\(\square\) Automatic safety edge detection and evaluation:
- Optical safety edge system (e.g. Vitector system)
- NO-contact principle, 8k2
- NC-contact principle, 1k2, with testing
\(\square\) Automatic closing with adjustable time setting (1-240 seconds) (function can also be activated/ deactivated):
- Once the top limit position or intermediate open position has been reached, the door closes automatically after the set duration
- Interruption to timer possible via photo cell activation
- Adjustable intermediate open position with individual programming options
Setting of the permissible number of safety-edge actuations for automatic closure (0-10)
- Adjustable reversing duration for safety-edge actuation

\section*{Further functions}
\(\square\) Automatic ground adjustment (only DES) to compensate for rope stretch or subsequent change in ground height (not for pressure-wave switches)
\(\square\) Overrun correction (only DES) to compensate for changes to overrun, e.g. due to influence of temperature
- Status and information display (including display of 6 most-recent faults); extended evaluation by using optionally available GfA-Stick (see 8.069)
- Cycle counter (non-resettable)

Maintenance-cycle counter:
- Setting range: 1,000-99,000 cycles
- Display indication or switch to hold-to-run operation once the maint nance-cycle limit is reached
Detects door/drive blockage (only DES); in this event the control deactivates the drive unit
Dynamic run time monitoring (only NES):
- With every door movement, the time taken to run between the end positions is measured and compared with the most-recently set reference duration
- If the run duration is increased (pre-settable deviation), the control panel is deactivated
\(\square\) Adjustable force monitoring in OPEN direction (only DES):
- For counterbalanced doors, sudden changes to the counter-balancing are detected
- Self-learning feature and consequently no activation of force monitoring function due to, e.g., a change in spring tension
- Automatic detection of ELEKTROMATEN unit with direct inverter (DI) or frequency inverter (FI):
- Setting of output speed
- Soft start and soft stop through automatic adjustment of acceleration and braking ramps
- Possible to modify acceleration and braking ramps

\section*{TS 971 door control}

\section*{"Integrated radio"}

Automatic control panel for GfA ELEKTROMATEN \({ }^{\circledR}\) drives with DES digital limit switch or NES mechanical limit switch

\section*{Approvals and certificates}

TS 971
Type test according to:
DIN EN 12453 DIN EN 12978
DIN EN 60335-1
DIN EN 60335-2-103
DIN EN ISO 13849-1 TÜV NORD CERT GmbH

TS 971 - Automatic control panel for DES / NES limit switches

\section*{Technical data}
- For GfA ELEKTROMATEN drives with DES or NES
- Supply voltage:

1 N~230 V, PE / 3~230 V, PE / 3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Control voltage: 24 V DC
- Mains supply ratings for external devices: 24 V DC ( 0.35 A or 1.0 A ) / 230 V AC (1.6 A)
- Permissible temperature range: \(-10^{\circ} \mathrm{C} \ldots+50^{\circ} \mathrm{C}\)

\section*{Housing}

Dimensions W \(\times\) H x D [mm]: \(155 \times 386 \times 90\left(118^{11)}\right.\)
- IP65 rated when hard wired or IP54 if CEE plug used
- Protection against contact provided by covers for live parts
- Top and botton entry for ELEKTROMATEN connection cables

\section*{Design}

■ Integrated OPEN-STOP-CLOSE control device with lighting system that prompts operator
\(\square\) Safety reversing contactor (with 2 independent shutdown options)
- Settings via selector switch with digital display
- Pluggable connection technology
- Connection cable running to ELEKTROMATEN available in various lengths
- Integrated radio transmission system for safety devices (WSD \({ }^{2)}\) ) or pluggable connection technology for spiral cables
- Integrated radio receiver for 434 MHz systems of various manufacturers
\(\square\) Two independent, programmable relay contacts, e.g. usable for red/green traffic-lights or dock leveller enabling
\(\square\) UBS \(^{31}\) module for the simple connection of control devices, photo cells, etc. (for details on UBS accessories, see 8.091)
\(\square\) Slack-rope and pass-door plug-in connection points (also via WSD)

\footnotetext{
1) Version with mains switch
2) Wireless Safety Device
3) UBS universal command sensor system (see 8.091)
}

\section*{Accessories}

Mains switch/isolator
Emergency STOP switch
- Key switch
- For description and details on further accessories, see 8.075

\section*{Functions}
\(\square\) Automatic detection of DES or NES limit switches
- Change of rotating direction from control panel push buttons
■ Adjustment of limit positions (only DES) and all functions from the operator level
\(\square\) Selectable operating mode:
- CLOSE/OPEN in hold-to-run mode
- CLOSE in hold-to-run mode/OPEN in self-hold mode
- Hold-to-run operation with active safety edge system
- CLOSE/OPEN in self-hold mode
- Automatic safety edge detection and evaluation:
- Optical safety edge system (e.g. Vitector system)
- NO-contact principle, 8k2
- NC-contact principle, 1k2, with testing

Automatic closing with adjustable time setting (1-240 seconds) (function can also be activated/ deactivated):
- Once the top limit position or intermediate open position has been reached, the door closes automatically after the set duration
- Interruption to timer possible via photo cell activation
- Adjustable intermediate open position with individual programming options
Setting of the permissible number of safety-edge actuations for automatic closure ( \(0-10\) )
- Adjustable reversing duration for safety-edge actuation

\section*{Further functions}

Automatic ground adjustment (only DES) to compensate for rope stretch or subsequent change in ground height (not for pressure-wave switches)
\(\square\) Overrun correction (only DES) to compensate for changes to overrun, e.g. due to influence of temperature
- Status and information display (including display of 6 most-recent faults); extended evaluation by using optionally available GfA-Stick (see 8.075)
- Cycle counter (non-resettable)

Maintenance-cycle counter:
- Setting range: 1,000-99,000 cycles
- Display indication or switch to hold-to-run operation once the maintenance-cycle limit is reached
Detects door / drive blockage (only DES); in this event the control deactivates the drive unit
Dynamic run time monitoring (only NES):
- With every door movement, the time taken to run between the end positions is measured and compared with the most-recently set reference duration
- If the run duration is increased (pre-settable deviation), the control panel is deactivated
- Adjustable force monitoring in OPEN direction (only DES):
- For counterbalanced doors, sudden changes to the counter-balancing are detected
- Self-learning feature and consequently no activation of force monitoring function due to, e.g., a change in spring tension
- Automatic detection of ELEKTROMATEN unit with direct inverter (DI) or frequency inverter (FI):
- Setting of output speed
- Soft start and soft stop through automatic adjustment of acceleration and braking ramps
- Possible to modify acceleration and braking ramps

\section*{TS 981 door control}

Control panel with traffic management for GfA ELEKTROMATEN \({ }^{\circledR}\) drives with DES digital limit switch

\section*{Approvals and certificates}

TS 981 / TS 981 FT
Type test according to:
DIN EN 12453 DIN EN 12978
DIN EN 60335-1 DIN EN 60335-2-103
DIN EN ISO 13849-1 TÜV NORD CERT GmbH

TS 981 - Control panel with traffic management for DES

\section*{Technical data}
- For GfA ELEKTROMATEN drives with digital limit switch DES
- Supply voltage:

1N~230 V, PE / 3~230 V, PE / 3N~400 V, PE / 3~400 V, PE
- Operating frequency: \(50 \mathrm{~Hz} / 60 \mathrm{~Hz}\)
- Control voltage: 24 V DC
- Mains supply ratings for external devices: 24 V DC (1 A) / 230 V AC (1,6 A)

■ Permissible temperature range: \(-10^{\circ} \mathrm{C} . .+50^{\circ} \mathrm{C}\)

\section*{Housing}
- Dimensions W xHxD [mm]: \(190 \times 300 \times 115 \mathrm{~mm}\)
- IP65 rated when hard wired or IP54 with CEE plug
- Live electrical parts covered
- Incl. drilling template and fixing elements

\section*{Description}
- Integrated OPEN-STOP-CLOSE control device
- Connection points for two external three push buttons
- For hard wiring or with ready wired CEE plug and mains supply cable of length 0.7 m
- Settings via selector switch with digital display

■ Pluggable connection technology
\(\square\) Connection cable running to ELEKTROMATEN available in various lengths
\(\square\) Two independent, programmable relay contacts \({ }^{11}\), e.g. for use as status contacts
\(\square\) UBS \(^{21}\) module with 5 plug-in points for the simple connection of control devices, photo cells, radio receivers etc. (for details on UBS accessories, see 8.091)
\(\square\) Slack-rope and pass-door plug-in connection points
\(\square\) Terminals for two pull-switches or radio control
1 - or 2-channel available, functions programmable

\section*{Accessories}

Emergency STOP switch
- Key switch
- For description and details on further accessories, see 8.085

\section*{Functions}

Adjustment of limit positions and all functions from the operator level
Selectable operating mode:
- CLOSE/OPEN in hold-to-run mode
- CLOSE in hold-to-run mode/OPEN in self-hold mode
- CLOSE/OPEN in self-hold mode

Automatic safety edge detection and evaluation:
- Optical safety edge system (e.g. Vitector system)
- NO-contact principle, 8k2
- NC-contact principle, 1k2, with testing
- Automatic closing with adjustable time setting (1-240 seconds) (function can also be activated/ deactivated):
- Once the top limit position or intermediate open position has been reached, the door closes automatically after the set duration
- Interruption to timer possible via photo cell activation
- Adjustable intermediate open position with individual programming options
Entrapment evaluation, selectable:
- Optical systems
- NC/NO contact with resistor
- Safety photo cells

Automatic ground adjustment to compensate for rope stretch or subsequent change in ground height (not for pressure-wave switches)
\(\square\) Overrun correction to compensate for changes to overrun, e.g. due to influence of temperature
- Status and information display lincluding display of the two recent faults)
- Cycle counter (non-resettable)

\section*{Further functions}

Maintenance-cycle counter:
- Setting range: 1,000-99,000 cycles
- Display indication or switch to hold-to-run operation once the maintenance-cycle limit is reached
\(\square\) Detects door/drive blockage; in this event the control deactivates the drive unit
- Adjustable force monitoring in OPEN direction:
- For counterbalanced doors, sudden changes to the counter-balancing are detected
- Self-learning feature and consequently no activation of force monitoring function due to, e.g., a change in spring tension
- Automatic detection of ELEKTROMATEN unit with direct inverter (DI) or frequency inverter (FI):
- Setting of output speed
- Soft start and soft stop through automatic adjustment of acceleration and braking ramps
- Possible to modify acceleration and braking ramps
- RWA function (smoke and heat extraction) actuates a compulsory door opening, to be used with external smoke alarm systems
\(\square\) One-way and two-way traffic control with adjustable functions such as: fore-warning time, extension of greenlight period, clearance time as well as priority to entry or exit
- Slot for memory cards \({ }^{21}\), for installing or upgrading software with SD or MMC cards

\section*{Special functions via optional modules}
- Status monitoring module (SMF):

Additional five contacts available for positioning and fault information
■ Air-lock module (SLF): For operating two TS 981 as an air-lock
- Panic module (extension to the SLF module): Interrupting the air-look function if an additional control device is actuated
1) Only for memory cards up to 1 GB

\section*{Connection options}

Part no. installation drawing: 50001350

\section*{Dock leveller control LB 700}
with auto-return function

\section*{Control for dock levellers}
with hinged wedge lip or extendible lip

\section*{Approvals and certificates}

LB 700
Type test according to:
DIN EN 1398:2009-07 § 5.4.2
DIN EN ISO 13849-1: 2008-12
TÜV NORD CERT GmbH

LB 700 - Control for dock levellers
with hinged wedge lip (1 valve)
with extendible lip (2 valves)

\section*{Technical data}

Supply voltage: 3~230 V, PE / 3N~400 V, PE
- Operating frequency: 50 Hz
- Max. power of the hydraulic unit: \(1,5 \mathrm{~kW}\)

Valve voltage: 24 V DC
- Max. valve current: 1 A
- Max. power consumption of the control: 30 VA

Max. power of traffic lights: 40 W
- Max. power of loading zone lighting: 150 W
\(\square\) Permissible temperature range: \(+5^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\)

\section*{Housing}
- Dimensions BxHxT [mm]: 189×254×143

■ Degree of protection: IP65
Fitted with CEE-plug and 0.5 m cable ready for connection
- Integrated mains switch
- Connection cable to dock leveller, insertion from bottom or top

\section*{Description}
- Integrated control device OPEN-AUTORETURN (hinged wedge lip); OPEN-EXTEND-AUTORETURN (extendible lip)
- Settings via selector switch with digital display
\(\square\) Nine programmable relay contacts for implementing various functions of the dock leveller

\section*{Functions}

Extending and retracting the dock leveller
- Adjustable extending and retraction times
\(\square\) Various safety functions for releasing and locking the dock leveller, for example through:
- Door contact
- Vehicle detector
- Wheel-block sensor
- Position sensor

Control of two traffic lights and one loading zone light with additional activatable timer:
- Red-green traffic light outside
- Red-green traffic light inside
- Spotlight to illuminate the loading zone

Status and information display (including display of two most-recent faults)
- Cycle counter (non-resettable)

Maintenance-cycle counter:
- Setting range: 1,000-99,000 cycles
- Display indication or switch to hold-to-run operation once the maintenance-cycle limit is reached
Energy-saving mode:
Optional switching off of the valve voltage after reaching the final limit positions

\section*{Additional functions}
\(\square\) Shelter function:
For controlling a door seal; the door seal provides an energy-efficient contact between door and vehicle; Two tubular motors and one compressor can control a door seal using the LB 700; this function can be started automatically or manually

\section*{ZB}

\section*{Safety devices}

\section*{Safety edge systems}

\section*{Principle}

Safety edge systems are protective devices designed for use with power-operated doors and gates in accordance with DIN EN 12978. They provide personal protection at main closing edge and secondary closing edges.
The use of safety edge systems is subject to the European Standard EN 12453 "Safety in use of power-operated doors" requirements, along with the corresponding specifications.

The requirements of EN 12978 regarding signal processing and Output Signal Switching Device OSSD \({ }^{11}\) are fulfilled by GfA control units and door
 controls TS 970/TS 971/TS 981. The operating forces must comply with EN 12453. We offer a range of TÜV Nord-tested combinations of components in this respect.

The above-mentioned edge safety devices belong to the category of Pressure-Sensitive Protective Equipment PSPE \({ }^{21}\).

\section*{They consist of:}
- Signal transmitter (safety edge or wireless radio systems)

Signal transfer (e.g. spiral cable)
- Signal processing and output signal switching device OSSD \({ }^{11}\)
(e.g. door controls TS 970/TS 971/TS 981 or separate evaluators)

\section*{The following operating principles apply to the signal transmitters:}

\section*{Optical safety edge (e.g. Vitector OSE system)}
- The optical-safety edge operates with a signal transmitter consisting of two self-controlling

IR beams they are fitted into a rubber profile of the safety edge. When pressing the rubber profile the IR beam is interrupted and the evaluator recognizes a signal change.

\section*{Electrical safety edge (Gelbau system)}
- The electrical safety edge operates with a signal transmitter consisting of two electrical conductors, which are kept at a certain clearance with respect to each other by the configuration of the signal transmitter. When pressing the rubber of the signal transmitter, the two conductors touch each other and the evaluator recognizes a signal change.

\section*{Pneumatic safety edge (testing)}
\(\square\) When the signal transmitter is triggered, a pressure impulse is generated, which actuates a membrane in the pressure-wave switch. This membrane converts the pressure impulse into an electrical signal, which can then be processed by the evaluating system.
1) Output signal switching device
2) Pressure sensitive protective equipment

\section*{Optical safety edge system}

\section*{Vitector OSE system}

\section*{Principle}

Principle of OSE safety edge operation is that of a guided IR (Infrared) beam in a rubber profile.
When pressing the rubber profile the IR beam is interrupted and the evaluator recognizes a signal change. A re-open command is generated and the door moves to final open position.

\section*{The transmitter}

The transmitter generates a pulsed infrared signal, whose strength is automatically adapted to the length of the rubber profile, in order to ensure optimum sensitivity at all times, along with a high degree of operating safety.
The transmitter is self-learning, and can thus compensate for wear on
 electronic components or the rubber profile, along with slight deformations caused by damage to the door panel.

\section*{The receiver}

The receiver reacts to the continued presence of the dynamic infrared light beam by generating an error message.This is recognised by the signal evaluating system and triggers an interruption of the movement causing the hazard.

The signal will be recognised directly in door controls TS 970/TS 971/TS 981.
For other applications, such as use of door control WS 900, the external control unit 647
is available.
The design of the Vitector OSE optical safety edge system makes it especially suitable for DIY assembling.

\section*{Principle}

\section*{Safety edge not activated}

Safety edge activated

\section*{Optical safety edge system}

\section*{Vitector OSE system}

\section*{System 1 - with one junction box (1), (2) or 3)}

The transmitter cable A is routed through the hollow space of the rubber profile to the junction box. The cable of the receiver (B) is routed directly to the junction box.
- For the WSD \({ }^{11}\) (1) the connection to the door control is made by radio ©.
\(\square\) When connecting with a spiral cable 2/3, the connection to the door control is always pluggable (D.
- The connections for the transmitter and receiver are pluggable (4) or screwable (5).

\section*{Only for (2):}

Independent the displayed functions of the door control the receiver and transmitter can be checked (function and voltage) by integrated LED © .

1) Wireless Safety Device - can only be used with door control TS 971

\section*{Electrical safety edge system}

Gelbau system

\section*{Principle}

The Contact-Duo profile (signal transmitter) is fitted with two parallelrunning, electrical conductors, which are isolated from each other by rubber insulators. A copper strip is also incorporated lengthways into each extruded moulding.
These electrically conductive zones carry the zero signal current, which is monitored by the signal evaluating system. Whenever the rubber profile is activated during access, a re-open command is generated and the door moves to final open position.

The signal will be recognised directly in door controls TS 970/TS \(971 / T S ~ 981\).

We supply assembled electrical safety edges ready to be installed on site.

\section*{Pneumatic safety edge system}

\section*{Testing}

\section*{Principle}

The pushing together of the rubber profile generates a pressure impulse, which is directed via an air hose to the dynamic pressure-wave switch (DW). This one-sided increase in pressure acts on the membrane. This opens the contact between the contact screw and the membrane (opening principle). Whenever the rubber profile is activated during access, a re-open command is generated and the door moves to final open position.

A potential-free limit switch actuates just before the bottom end-point is reached (approx. 5 cm ) to activate the test phase. The safety device is disabled during the test phase.

When the door sets on the ground, a pneumatic test impulse must be
 generated. If the test result is positive, the door can then move to its self-hold OPEN or CLOSE position. If a malfunction occurs, the door can only be operated in hold-to-run mode. Opening can take place in self-hold mode again once any possibility of hazardous door movements has been eliminated.

The signal will be recognised directly in door controls TS 970/TS 971/TS 981.
The design of this pneumatic safety edge system makes it especially suitable for DIY assembling

\section*{Safety devices \\ Safety against entrapment}

Power-operated doors and grilles which can lift persons have to be safeguarded according to EN 12453, section 5.1.2 to avoid crushing, shearing and drawing-in-points.
The "Raytector" safety device against entrapment belongs to this category of
AOPD \({ }^{11}\) with following functions:
- Detection of presence
(Safety photo cells according to IEC 61496-2)
Evaluation and monitoring
(Evaluator)
- Output Switching Signal Device OSSD \({ }^{21}\)
(Evaluator)
The system full fills the requirements of safety category 3 according to EN ISO 13849-1

\section*{Description of functions:}

The photo cell transmitted pulsed infrared light, which is detected by the corresponding receiver. This generates a dynamic signal, which is identified and evaluated by the control unit. If the signal remains off, e.g. due to interruption of the light cell, a stop command is immediately generated. The transmitter/receiver system adjusts itself automatically over a range of up to ten metres.

\section*{Examples}

\section*{Rolling grilles}

- Additional photo cell required if \(A<2,500 \mathrm{~mm}\) and \(B<80 \mathrm{~mm}\) (by open shutter)

Roller shutter

Guarding the point of entrapment with a photo cell, if \(C<2,500 \mathrm{~mm}\). Additional photo cell is required if \(A<2,500 \mathrm{~mm}\) and \(B<80 \mathrm{~mm}\) (by open shutter)

Subject to technical alterations - on request, we supply article- and/or model-specific lists of spare parts

1) The following applies to drive units up to 2022: please see page 9.061 .
2) Standard configuration for \(3 \sim 230 \mathrm{~V} / 400 \mathrm{~V}-50 \mathrm{~Hz}\) - 3) Up to approx. 02/2021 . 4) Up to approx. 07/2020 - 5) From approx. 03/2021 - 6) From approx. 08/2020

Other versions are available in addition to the listed replacement brake sets. Please contact your sales representative in case of doubt. Please write down in advance the
part and serial number of the drive unit.

[^0]:    Permitted installation: Horizontal (as shown) or vertical (motor at the bottom)

[^1]:    $\mathrm{F}=$ Lift [ N ]
    $\mathrm{v}_{\mathrm{a}}=$ Initial speed $[\mathrm{cm} / \mathrm{s}]$

[^2]:    $\square F=\operatorname{Lift}[\mathrm{N}]$
    Read notes in 3.2 and 3.7

[^3]:    - Right- or left-hand use

    ■ ELEKTROMATEN vertical (as shown) or horizontal (for vertikal mounting, the FI -motor has to be turned by $90^{\circ}$ )
    For mounting with floating foot additional requirements: Bracket 6.1 or 6.2 and bearing

[^4]:    Generally applies: Degree of protection IP65 (combined with WS 900: IP54), permissible temperature range $-10^{\circ} \mathrm{C} . . .+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$ 1) Maximum torque that may act on the output shaft of the drive unit when the door is stationary - 2) We recommend the selection of GfA ELEKTROMATEN-FI for use with frequency inverter, OPEN drive speed at 87 Hz , see 3.7 - 3) The operating current in door drives can reach up to 4 x the rated current for limited periods, see 3.6 and 3.7 .
     used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also $3.2 \cdot 5$ ) Maximum revolutions of hollow shaft . 6) See 3.4

[^5]:    For chain and sprockets, the maximum permitted torque $M_{a b}$ on ELEKTROMATEN is as shown in the table (safety factor $6 x$ the breaking strain.

[^6]:    Generally applies: Degree of protection IP65, permissible temperature range $+5^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right)$, operating sound pressure level SPL <70 dB(A)

    1) See 3.6-2) Maximum torque that may act on the output shaft of the drive unit when the door is stationary . 3) One cycle consists of a complete opening and closing movement of the door. The value according to EN 60335-2-103 is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also 3.2 4) Maximum revolutions of hollow shaft, E20 standard with DES • 5) See 3.4
[^7]:    F = Lift [ N ]

[^8]:    For chain and sprockets, the maximum permitted torque $M_{a b}$ on ELEKTROMATEN is as shown in the table (safety factor $6 x$ the breaking strain

[^9]:    1) See 2.7
    2) Use additional adapter part no. 3000585
[^10]:    Generally applies: Degree of protection IP65 (combined with WS 900: IP54), permissible temperature range $-10^{\circ} \mathrm{C} \ldots+40^{\circ} \mathrm{C}(+60$
    $+5^{\circ} \mathrm{C} . .+40^{\circ} \mathrm{C}\left(+60^{\circ} \mathrm{C}\right) \rightarrow$ ELEKTROMATEN FI with built-on frequency inverter, operating sound pressure level SPL $<70 \mathrm{~dB}(\mathrm{~A})$

    1) Additional hollow shafts- $\varnothing$ on request - 2) See 2.5 - 3) We recommend the selection of a special ELEKTROMATEN (enquire) for use with frequency inverter, OPEN drive speed 1) Additional hollow shafts- 0.0 r request - 2) See 2.5 - 3) We recommend the selection of a special ELEKTROMATEN (enquire for use with frequency inverter, OPEN drive speed
    at 87 Hz (not valid for SE $6.80 \mathrm{FI} / 14.80 \mathrm{FI}$, see 2.7 and $2.8 \cdot 4$ ) The max. current in door drives can reach up to 4 x the rated operating current for limited periods, see 2.6 and 2.7 . 5) One cycle consists of a complete opening and closing movement of the door. The value according to EN $60335-2-103$ is given in brackets. If the limit switch range is not fully used, the number of possible cycles can be increased in relation to the reduced number of revolutions of the output shaft, see also 2.2-6) Maximum revolutions of hollow shaft • 7) See 2.7-8) Applies to hollow shaft $\varnothing$ ( $31,75 \mathrm{~mm}$
